Made In
CN

Warranty
3 year

Lumens

Beam Pattern
Combo

Product Information

While humans can perceive various shades of yellow, blue, green, and red, many animals cannot perceive red and green. This makes the use of Green High Power Lighting a great solution for hunting or researching animals in the wild. In addition, the human eye is more receptive to green light than red light, so tactical flashlights fitted with green bulbs allow hunters to see further and better. Green lights also allow for better contrast at night, making them ideal for hunting darkly colored animals, such as feral hogs.
